MANHASSET MIDDLE SCHOOL

Curriculum Guide for Parents

INTRODUCTION

This guide is designed to provide parents with an outline and overview of the middle school curriculum for seventh and eighth grade.

Manhasset's goals, expectations, and aspirations are the same for all children. However, all children are not the same. They have different talents and abilities, interests and emotions, strengths, areas of growth, and learning styles. For each individual, an education program is desired that will stimulate the full development of potential. We must, therefore, provide considerable choice and flexibility for each student together with basic requirements. Each child should develop self-confidence and a belief in the success that follows from learning. We want each child to develop self-discipline, a sense of integrity and responsibility, and a capacity for continued self-directed learning. School success is not only academic success.

Our middle school program continues to move in a direction consistent with educating early adolescent children. Wherever possible we provide opportunities for our students to become involved in interdisciplinary activities. Teachers are working together to find ways to integrate curriculum and plan activities and projects which reinforce learning and show students the connections that exist in the disciplines they study.

Our teachers have always designed their curriculum, lesson plans and teaching strategies guided by two questions: "What do I want my students to know at the end of the year?" and "What do I want my students to be able to do with this knowledge?" Both the N.Y.S. Learning Standards and the Manhasset Standards represent the thinking of educators and community members about the essential knowledge and skills that all students need to succeed as learners. Teachers in the middle school, as well as the entire district, continue to align curriculum to meet those standards.

Middle schools educate students who are in a very important stage of development. The middle school movement recognizes the importance of having a distinct philosophy for this very special age group.

Course Timeline - 2026-27

1/12/26 - 1/15/26	Students receive elective selection permissions online and fill them out during the week.
1/29/26	Deadline for course recommendation entry. Course recommendations will be shared with students.
4/27/26	The override form for the 26-27 school year will be shared with students and parents/guardians.
5/1/26	The override form for the 26-27 school year is due.
6/25/26	Deadline to rescind 26-27 override request.
10/2/26	● Deadline for selecting a Pass/Fail option for a Fall half-year course.** ● A student must remain in their override course until this date.
11/6/26	● Deadline for selecting a Pass/Fail option for a full-year course.** ● Last day to drop a Fall half-year elective course.
12/11/26	Last day for ANY full-year course changes/drops.
3/6/27	Deadline for selecting a Pass/Fail option for a Spring half-year course.**
4/3/27	Last day to drop a Spring half-year elective course.

** Please see Pass/Fail Option on Page 10 for more information.

IMPORTANT ITEMS

The information contained in this course catalog is accurate as of its publication. Any changes will be communicated to students and parents/guardians in a timely manner. Courses will be run based on sufficient enrollment and the approval of the 2026-2027 school budget; this particularly applies to those courses listed as new course offerings. Excess demand for a particular course may result in a waiting list.

FULL YEAR COURSES / HALF YEAR COURSES

Full year (1 credit) courses meet every regular class day of the school year. Half year ($\frac{1}{2}$ credit) courses typically meet every day for one semester (*i.e.*, one half of the school year). Half credit courses may also be offered on an alternating day basis throughout the full school year, depending on the unique staff and/or student scheduling needs in a particular school year. Student placement in the core academic classes and many electives is determined based on teacher recommendation and department prerequisites, as noted in this course catalog.

COURSE RECOMMENDATIONS

Course recommendations are made by teachers based on student achievement and course requisites. Course recommendations are made based on achievement by the end of the 2nd quarter. Students and parents/guardians should weigh the following when considering their total program for the following year:

- The rigor of all other recommended courses to ensure that the potential total workload is manageable.
- That their commitment to extracurricular activities will not hinder their ability to commit to a more demanding course load.

HONORS OVERRIDE

Course recommendations for the 26.27 school year are entered by **January 29, 2026**. If a high school student is not recommended for placement in an Honors or AP course, the student and parent/guardian may exercise an Honors Override. The following policies will apply:

- The override form will be shared with students and parents/guardians on **Monday, April 27, 2026 at 8 a.m.** The form must be filled out by **Friday, May 1, 2026 at 11:59 p.m.** Please note some of the following components:
 - No override will be accepted or changed past Friday, May 1, 2026 at 11:59 p.m.
 - Students can rescind their override request on/before June 25, 2026.
- To qualify for an override, the student must be earning a minimum unweighted cumulative grade of “B” in the preceding course by **the end of the 3rd quarter, including the midterm grade (April 15, 2026)**. Please note some of the following components:
 - The student **MUST** maintain a minimum unweighted cumulative grade of “B” as their final grade in the course. If a student does not earn that final grade, the override will not be honored and another override will not be granted.

- o Teachers may change their recommendation if a student has met the grade prerequisite of the following year's course by the end of the **3rd quarter (April 15, 2026)**. *Any change made will occur prior to the sharing of the override form. Students and parents/guardians will be notified of this change by the teacher.*
 - o If a student and parent/guardian filled out an override for a specific course, but, at the end of the school year, they met the grade prerequisite for that course, they do NOT receive another override.
 - o If a student rescinds their override request, they do NOT receive another override.
- Only **one** Override may be exercised per student, per year.
- Overrides are **not** applicable to Art, Music or Theatre courses. An override is also not applicable to Earth and Space Science/ AP Environmental Science, Honors Regents Biology/AP Environmental Science, and AP Research. A student cannot override into Chemistry H unless they have successfully completed or are concurrently enrolled in Algebra 2.
- A student must remain in the override course until the 1st quarter progress report release (**October 13, 2026**). No course change will be accepted after the 2nd quarter progress report is released (**December 22, 2026**). Please note that any course change may not be possible within the school-wide schedule for all students and/or may have an impact on the student's academic program. The student's unweighted numerical grades in the higher-level course will carry over to the new course.

CHANGING OF AN ACADEMIC COURSE

A new course, of comparable level, may only be added to a student schedule before the start of a school year. Courses of a greater level cannot be added, as the time frame for exercising the high school's honors override policy would have passed. A student who was recommended for a particular level of a required course (*i.e.* AP, Honors, Regents, or X) may find that the rigor of the course is more difficult than they had anticipated.

Please note the following when considering a course change:

- While not mandatory, students are encouraged to remain in their courses for the first two weeks of the school year.
- Any course change must be made by the 2nd quarter progress report release (**December 22, 2026**). Please note that any course change may have an impact on the student's academic program.
- If the level of a full-year course is changed **at any time**, students will understand that their unweighted numerical grades in the higher-level course will carry over to the new course.

INCOMPLETE GRADES

If a student receives a grade of “Incomplete” at the end of any marking period, the student has ten (10) school days to complete all missing assignments/assessments. At that time, the teacher will submit the grade earned. Any further extension beyond the allowed ten (10) days can only be approved by the Principal.

DROPPING ELECTIVE COURSES

A student who wishes to drop a course that is not required for graduation will understand that the following policies will apply:

- Students should consult with the teacher and obtain the Schedule Change Request form, which requires the signature of the student, parent, teacher, department director and is then submitted to the Counseling Center.
- A half-year elective course dropped from a student’s schedule prior to the midpoint of the first quarter (***October 2, 2026***) will not appear on the student’s transcript.
- Students who drop a half-year elective course and receive approval to do so after the midpoint of the first quarter (***October 2, 2026***) will understand that the course grade will appear as a “W” (withdrawn) on the student’s transcript.
- A full-year elective course cannot be dropped after the date of the 2nd quarter progress report release. (***December 22, 2026***).
- Students who drop a full-year elective course and receive approval to do so during the second quarter (prior to ***December 22, 2026***) will understand that the course grade will appear as a “W” (withdrawn) on the student’s transcript.
- A full-year elective course dropped from a student’s schedule prior to the last day of the first quarter (***November 6, 2026***) will not appear on the student’s transcript.
- A half-year elective course dropped from a student’s schedule prior to the midpoint of the third quarter will not appear on the student’s transcript.
- Students who drop a half-year elective course and receive approval to do so after ***March 6, 2027*** (the midpoint of the third quarter) will understand that the course grade will appear as a “W” (withdrawn) on the student’s transcript.

Art

67N100 Art 7

This alternate-day, full-year course introduces students to the creative process through hands-on experiences in a variety of visual media. Students explore the elements and principles of design while developing basic skills in drawing, painting, printmaking, and three-dimensional work. Projects encourage creativity, craftsmanship, and an appreciation for art in historical and contemporary contexts.

68N100 Art 8

This alternate-day, full-year course builds on the previous classroom art experiences with more in-depth exploration of visual problem-solving and skill building. Students refine their understanding of the elements and principles of design while experimenting with a variety of materials and techniques, which may include drawing, painting, printmaking, three-dimensional design, and more. Emphasis is placed on developing confidence, craftsmanship, and originality through a range of creative challenges.

65N122 Accelerated Art 8

This every-day, full-year course is designed for highly motivated students who demonstrate advanced interest and ability in the visual arts. The curriculum parallels the Studio in Art course offered at the High School level with more rigorous, in-depth study of composition, technique, and creative problem-solving. Students explore a variety of media that may include drawing, painting, printmaking, three-dimensional design, and more. Independent work, art history connections, and portfolio preparation are emphasized in a supportive studio environment. Success in Accelerated Art 8 may serve to fulfill the Studio in Art prerequisite required for advanced electives in the high school art program.

Prerequisite: Art teacher recommendation.

67N900 Theatre MS

This is a class in improvisational drama and video which meets every other day for the semester. In the class, students work collaboratively to solve production problems and to develop skill in acting and video production. As the class progresses students will increase their ability to express feelings and ideas through the use of their body, voice, and oral language. They will also develop insight into how TV shapes reality by making commercials and producing news shows.

Business

47N014 Business and Career Exploration

Introduction to Business and Career Exploration will provide engaging opportunities for students to learn about themselves and the world as they explore the following topics: The Importance of Teamwork, Executive Functioning Skills, Effective Business Communication Best Practices, Professionalism, Exploration of Personality Traits, Careers vs Jobs, Career Clusters, Networking, Social Media Presence, The Business World from the Employer Side including: Hiring, Marketing and Branding, Achieving a Work/ Life Balance/ SEL, and Financial and Consumer Literacy.

English

17N001 English 7

In English 7, students read a variety of fiction and non-fiction works, poems, short stories and multi-paragraph expository, personal/narrative, and literary essays. A strong emphasis on close reading anchors the development of sophisticated skills associated with interaction with texts: writing dialectical journals, annotating, and developing active reading strategies define the critical foundational experiences of students. Writing includes a multi-paragraph expository essay and argument writing, both of which are based on literary works and thematically connected non-fiction. The use of text-based evidence in development of essays is strongly emphasized. Students also learn how to write a personal narrative. In conjunction with literature, seventh grade students are introduced to the process of research through an exploration of both print and electronic media; they develop the skill of establishing interdisciplinary Humanities connections. Mastery of literary devices such as figurative language, metaphor, simile, personification, hyperbole, symbolism, theme, motif, and plot are reinforced in class readings as well as individually selected outside works. Students use the skills of oral communication through presentation and group projects. Organizational strategies and study skills are taught to help our middle school students adjust to secondary level expectations.

18N001 English 8

In English 8, students read sophisticated fiction and non-fiction works, poems, short stories and multi-paragraph expository, personal narrative, and literary essays. A strong reinforcement of close reading techniques anchors the development of high-school level comprehension and appreciation of literature (novels, plays, and poems) and non-fiction selections. Students interact with text through dialectical journals, note-taking while reading, and fine-tuning active reading cognition skills. Writing reinforces mastery of the multi-paragraph expository essay and argument writing, both of which are based on literary works and thematically connected non-fiction. The use of text-based evidence in development of essays is strongly emphasized; students also write personal narratives, self-assessments, and creative pieces. Research-based projects and essays are developed around a given theme or genre of literature and include a presentation component; students learn the appropriate use of primary and secondary sources in research and how to incorporate sources in writing and presenting. Mastery of literary devices such as figurative language, metaphor, simile, personification, hyperbole, symbolism, theme, motif, plot, tone, mood and point-of-view are reinforced in class readings as well as individually selected outside readings. Students use the skills of oral communication through the presentation of class dramatizations and oral reports; they also apply the organizational and study skills required to complete a variety of writing and presentation tasks. Reflection, self-assessment, and initiative are emphasized as students prepare for high school.

17N010 English Writing Workshop 7

18N010 English Writing Workshop 8

The objective of these courses, designed for grades 7 and 8 is twofold: first, these courses reinforce critical reading, learning and thinking skills needed for successful participation in the Middle School Language Arts Program, and, second, these courses prepare students to meet the challenges presented by the Grade 7 and 8 New York State English Language Arts Assessment. Participation in these courses is prescriptive: students are recommended for both Reading and

Writing Workshop in Middle School, based on scores on the English Language Arts Assessment and teacher recommendation. These courses reinforce literacy skills developed in response to the learning standards articulated in the Next Generation Standards.

English as a New Language

19N114 ENL 7-8

This course is designed for English Language Learners (ELLs) in grades 7 and 8 who are at the entering or emerging proficiency levels based on the results of the NYSITELL (New York State Identification Test for English Language Learners). Instruction follows the New York State Part 154 Regulations and is aligned to the NYS Next Generation Learning Standards. Through thematic and cultural units, students build vocabulary, grammar, and communication skills needed for both social and academic success. Lessons emphasize the three modes of communication—interpretive, interpersonal, and presentational—and integrate reading and writing strategies to support achievement across all content areas. Students engage in interactive activities, collaborative projects, and authentic language experiences connected to real-world contexts and core academic subjects. Instruction is differentiated to meet the needs of students at various proficiency levels. All English Language Learners participate in the NYSESLAT (New York State English as a Second Language Achievement Test) each spring to measure annual growth in English proficiency and to determine continued placement in the ENL program.

18N502 ENL Workshop - MS

This course provides ongoing academic support for English Language Learners at all proficiency levels. Students receive differentiated instruction to enhance their reading, writing, listening, and speaking skills while developing the academic language and study strategies necessary for success across all subject areas. As part of CR Part 154 regulations this course may be required. This course meets every other day for the year.

Instructional Technology

37N004 Technology 7

Technology courses incorporate learning activities that address the NYS Learning Standards for Mathematics, Science and Technology and the Manhasset Standards of Excellence. Technology courses are required during a student's middle school years. The projects implemented in Technology integrate the development of skills involving mathematical analysis, scientific problem solving and engineering design.

38N004 Technology 8

Technology courses incorporate learning activities that address the NYS Learning Standards for Mathematics, Science and Technology and the Manhasset Standards of Excellence. Technology courses are required during a student's middle school years. The projects implemented in Technology integrate the development of skills involving mathematical analysis, scientific problem solving and engineering design.

97N999 Computer Literacy MS

This course provides a basic understanding of the workings of a computer and instruction in the Google Suite, MS Office, and other online software and applications. Techniques covered in the course will include, but not be limited to: Creating and analyzing spreadsheets and work with charts in Excel/Google Sheets, Presenting essays, letters, and narratives in various formats, Computer Programming instruction and units, Using online graphic editors such as Canva, Google Drawing, Creating oral presentations using PowerPoint/Google Slides, Creating brochures, flyers and cards using various software such as Canva, Padlet, Kami, etc., Exploratory work and discussions on Ai with software, accuracy, biases, advantages and disadvantages. Research and study skills will be reinforced by using the Internet and various online software subscriptions. Students will learn how to be safe while using the Internet. Students will develop proficiency in productivity tools (Google, MS, Etc.), while deepening understanding in 4 core areas: computer programming, cybersecurity, artificial intelligence, and data science. This is a project-oriented course coordinating English, mathematics, science, and social studies with computer applications. The projects selected will parallel authentic activities. With the recent adoption of the New York State Computer Science and Digital Fluency Learning Standards, emphasis will be placed on various concepts such as Impact of Computing, Computational Thinking, Networks and Systems Design, Cybersecurity, and Digital Literacy.

Math

******* New Course - needs # Math 180**

Math 180® is a targeted math intervention program that builds algebra readiness using proven strategies for striving students. Its adaptive student application, combined with teacher-facilitated instruction, accelerates students toward grade level success and, ultimately, successful completion of Algebra.

47N001 Math 7

In seventh grade, instructional time will focus on three areas: (1) developing understanding of and applying proportional relationships; (2) developing understanding of operations with rational numbers and working with expressions and linear equations; and (3) drawing inferences about populations based on samples.

47N005 Math 7 Accelerated

This is an accelerated math course that covers the 7th and 8th grade NYS math standards in one year. It includes units on numbers/operation, exponents, scientific notation, expressions, equations, inequalities, percents, ratios/rates, graphing, geometry of 2-D and 3-D figures, probability, and statistics. A preview of some topics pertinent to Algebra, such as polynomials, systems of equations, quadratics, and factoring may also be provided.

47N201 Math 7 Skills

This is an alternate day class that helps students to meet with proficiency in their Math 7 math course. Students will be presented with preteach, reteach, and cumulative review materials to further their understanding of topics addressed in class.

48N001 Math 8

In eighth grade, instructional time will focus on three critical areas: (1) formulating and reasoning about expressions and equations, including modeling an association in bivariate data with a linear equation, and solving linear equations and systems of linear equations; (2) grasping the concept of a function and using functions to describe quantitative relationships; (3) analyzing two- and three-dimensional space and figures using distance, angle, similarity, and congruence, and understanding and applying the Pythagorean Theorem.

48N201 Math 8 Skills

This is an alternate day class that helps students to meet with proficiency in their Math 7 math course. Students will be presented with preteach, reteach, and cumulative review materials to further their understanding of topics addressed in class.

41F111R Algebra R (HS)

This is the first course in the Regents mathematics sequence. The curriculum focuses on linear, quadratic, and exponential functions, as well as descriptive statistics. We will be exploring these functions graphically, numerically, symbolically and verbally. Students take the Algebra Regents exam at the conclusion of the school year in June. Students will be using the TI84/84+ graphing calculator.

Prerequisites: Math teacher recommendation and a grade of at least “C” in Math 8 or a grade of “B+” in Math 7.

41F111H Algebra H (HS)

This is the first course in the Regents mathematics sequence. This rigorous course covers the Algebra curriculum with linear, quadratic, and exponential functions, as well as descriptive statistics. We will be exploring these functions graphically, numerically, symbolically and verbally. This course also extends well beyond the standards to explore connections between representations of various functions and the rationale for algebraic algorithms. Algebra Honors is intended for those with superior math ability and a strong interest in the subject area. Students take the Algebra Regents exam at the conclusion of the school year in June. Students will be using the TI84/84+ graphing calculator.

Prerequisites: A grade of at least “B+” in Math 8 or “A-” in Math 7, & Math teacher recommendation.

42F201R Geometry R (HS)

This is the second course in the Regents mathematics sequence. This course focuses on topics in plane, coordinate, and solid geometry. The curriculum includes constructions, congruence, similarity, triangles, polygons, circles, transformations, introductory trigonometry, and 3-dimensional figures. The course involves using inductive and deductive reasoning to form mathematical conclusions with proofs in a variety of forms. Students will take the Geometry Regents in June. Students will be using the TI84/84+ graphing calculator.

Prerequisites: Successful completion of Algebra R and Math teacher recommendation.

42F201H Geometry H (HS)

This is the second course in the Regents mathematics sequence. This rigorous course focuses on topics in plane, coordinate, and solid geometry. The curriculum includes constructions, congruence, similarity, triangles, polygons, circles, transformations, introductory trigonometry, and 3-dimensional figures. The course involves using inductive and deductive reasoning to form mathematical conclusions with proofs in a variety of forms. Additionally, various enrichment topics will be included beyond standards. This course is intended for those with superior math ability and a strong interest in the subject area. Students will take the Geometry Regents in June. Students will be using the TI84/84+ graphing calculator.

Prerequisites: A grade of at least “B+” in Algebra H and Math teacher recommendation.

Music

69N440 Orchestra MS

The Middle School Orchestra Program is designed as a transition from the elementary school orchestra and a foundation for the advanced performing demands of the high school program. Students will continue their musical development through mastery of technical skills on their instrument and performing a varied repertoire of music alone and with others. They will increase their understanding of music fundamentals, aural skills, music reading ability, and better understand music in relation to history and culture. Two performing groups are available for students of varying musical abilities.

69N441 String Ensemble MS

The Middle School Orchestra Program is designed as a transition from the elementary school orchestra and a foundation for the advanced performing demands of the high school program. Students will continue their musical development through mastery of technical skills on their instrument and performing a varied repertoire of music alone and with others. They will increase their understanding of music fundamentals, aural skills, music reading ability, and better understand music in relation to history and culture. Two performing groups are available for students of varying musical abilities.

69N450 Concert Band MS

The Middle School Band Program is designed as a transition from the elementary school band and a foundation for the advanced performing demands of the high school program. Students will continue their musical development through mastery of technical skills on their instrument and performing a varied repertoire of music alone and with others. They will increase their understanding of music fundamentals, aural skills, music reading ability, and better understand music in relation to history and culture. Two performing groups are available for students of varying musical abilities.

69N451 Wind Ensemble MS

The Middle School Band Program is designed as a transition from the elementary school band and a foundation for the advanced performing demands of the high school program. Students will continue their musical development through mastery of technical skills on their instrument and performing a varied repertoire of music alone and with others. They will increase their understanding of music fundamentals, aural skills, music reading ability, and better understand music in relation to history and culture. Two performing groups are available for students of varying musical abilities.

69N501 Chamber Singers MS

A challenging program which works at a level equal to most high school programs. Sectionals allow students the opportunity to work in small groups to learn difficult music and to further develop healthy singing technique. Only the most advanced students, both musically and vocally, from seventh and eighth grade are accepted into Chamber Singers. Two mandatory concerts are presented each year. Students also have the opportunity to participate in NYSSMA Solo and Ensemble Festivals, Nassau All-County Chorus and various other community performances. Continued participation in this performance organization is dependent on being

supportive of fellow students, exemplary mature conduct, outstanding vocal production and solid musicianship.

Prerequisite: Audition by the director.

69N452 MS Chorus

The Manhasset Middle School Choral Program serves as a transition from elementary school chorus and general music into a secondary choral program. Students continue their musical development through the study and performance of a wide variety of musical styles from classical to contemporary popular repertoire. Three performing groups are available for student participation.

Physical Education/Health

79N004 PE 7-8

Grades 7 and 8 Physical Education students will: move, using concepts of body awareness and space awareness, demonstrate competence and proficiency in combinations of locomotor, and manipulate skills performed individually and with others, demonstrate competence and proficiency in many different forms of physical activity and skills, participate regularly in interpersonal skills such as cooperation, problem-solving, communication, sharing, courtesy, respect, leadership, honesty and a sense of fair play, establish realistic and attainable goals pertaining to exercise, fitness, and wellness, participate regularly in moderate lifetime physical activities for the development and maintenance of health related fitness, socialization, recreation, and stress reduction, demonstrate safe practice and techniques when participating in physical activity, know the rules, strategies and appropriate behaviors for selected physical activities as both a participant and a spectator, know that participation in physical activity can lead to multi-cultural understanding, the concepts and principles inherent to the development of health-related fitness, wellness, and positive health practices, know how to assess one's health related fitness, and as a result, design a personal fitness program in accordance with the principles of training and conditioning, value physical activity as an essential element in one's lifestyle, and value participation in physical activity as an enjoyable experience.

78N001 Health 8

Grade 8 Health Education students will: recognize patterns of behavior that promote emotional well-being and positive interpersonal relationships, understand the role of nutrition in maintaining good health, demonstrate an appreciation of the role of the family in society and an understanding of human sexuality, understand the behaviors that are needed to prevent illness and minimize diseases, understand the physical, social, and emotional factors associated with substance abuse, understand that HIV infection is a preventable disease and identify the methods of preventing the spread of HIV, and recognize the importance of maintaining a safe environment and to learn to respond appropriately to emergencies.

Science

37N002R Earth and Space Science Honors 7

This is a more rigorous course that extends beyond the Earth and Space Science standards. Earth's systems and the universe, aligning with the New York State Science Learning Standards. Students will investigate the dynamic processes that shape our planet, including geology, Earth's history, meteorology, oceanography, and astronomy. Through hands-on investigations learners will develop scientific inquiry skills, collaborative projects, and critical thinking activities, learners will develop a comprehensive understanding of Earth's structure, atmospheric phenomena, and the celestial bodies that comprise our solar system. To participate in the Regents exam, students are required to complete 1200 minutes of satisfactory labs. In addition to the classroom period being scheduled to meet every day the class meets for a double period every other day for laboratory sessions. The students are required to take the New York State Earth and Space Regents exam. In addition to the classroom period being scheduled to meet every day, the class meets for a double period every other day for laboratory sessions.

Prerequisite: Students must be accepted into the double-accelerated science program.

37N001 Science 7

This three-dimensional course will build on the Disciplinary Core Ideas that accompany the New York State Science Learning Standards learned in previous years. Students will have the opportunity to study and to investigate the scientific phenomena related to Physics (Forces, Waves and Electro-Magnetic Radiation, Electricity and Magnetism, Circuits and Signals), Life Science (Photosynthesis and Respiration), and Earth and Space Science (Weather) . This course meets for a single period each day and will culminate with a final exam.

38F001R Biology Regents

This course provides a comprehensive overview of biological principles and processes, aligned with the New York State Science Learning Standards. Students will investigate the fundamental concepts of life sciences, including cell structure and function, metabolic processes, body systems, genetics, evolution, ecology, and the interdependence of organisms within ecosystems. Through hands-on investigations and critical thinking activities, learners will engage with real-world applications of biological concepts and develop scientific inquiry skills. To participate in the Regents exam, students are required to complete 1200 minutes of satisfactory labs. The students are required to take the New York State Biology Regents exam In addition to the classroom period being scheduled to meet every day, the class meets for a double period every other day for laboratory sessions.

38F001H Biology Honors

This is a more rigorous course that extends beyond the biological principles and processes, aligned with the New York State Science Learning Standards. Students will investigate the fundamental concepts of life sciences, including cell structure and function, metabolic processes, body systems, genetics, evolution, ecology, and the interdependence of organisms within ecosystems. Through hands-on investigations and critical thinking activities, learners will engage with real-world applications of biological concepts and develop scientific inquiry skills. To participate in the Regents exam, students are required to complete 1200 minutes of satisfactory labs. The students are required to take the New York State Biology Regents exam. In addition to

the classroom period being scheduled to meet every day, the class meets for a double period every other day for laboratory sessions.

Prerequisites: Science teacher recommendation and A- in Science 7.

38N601X Biology X

This is a Response to Intervention (RTI) class for selected Biology students. Students attend a support period every other day for the full school year to receive targeted instruction to reinforce the content being taught in the Biology R class.

38F019A Biology Honors / AP Environmental Science (BAPES)

This is the most rigorous course that extends beyond the New York State Science Learning Standards Biology. Topics will be studied at greater depth and will include material that follows the Advanced Placement Environmental Science curriculum outlined by the College Board. The course is designed to explore biological and environmental topics at a rigor equivalent to that of a first-year college course. This course is designed for students with superior ability and high interest in science. Through hands-on investigations and critical thinking activities, learners will engage with real-world applications and develop scientific inquiry skills. To participate in the Regents exam, students are required to complete 1200 minutes of satisfactory labs. The students are required to take the New York State Biology Regents exam and the AP Environmental Science exam. The class meets for a double period every day.

Prerequisites: Physical Setting: Earth Science Honors and science teacher recommendation. Students cannot use an override for this course.

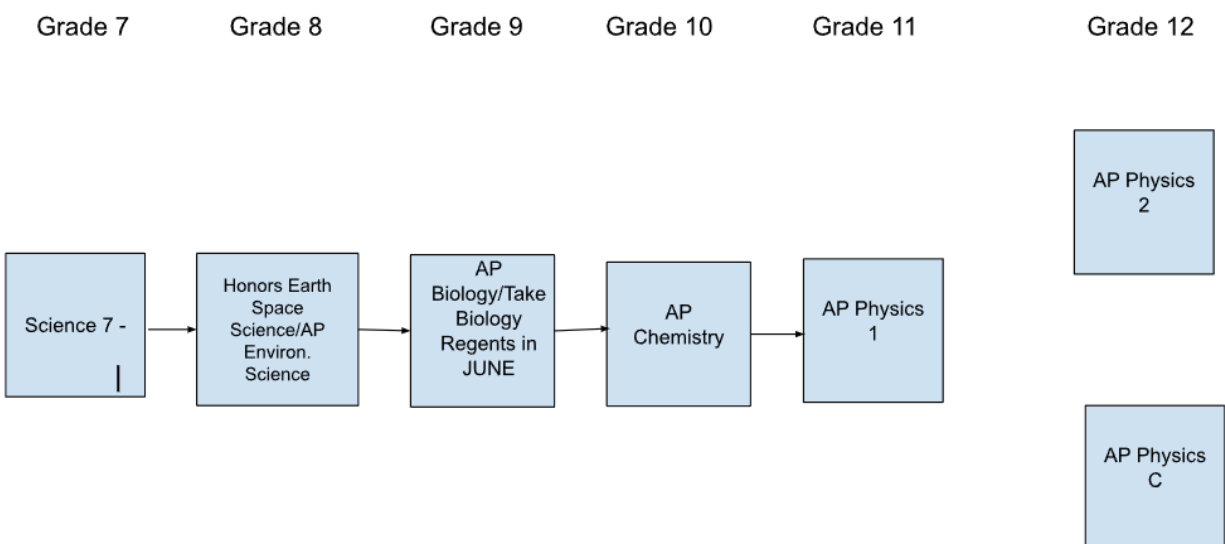

35F020H Earth Science / AP Environmental Science (ESCAPES)

This most rigorous course follows a combined curriculum outlined by the Earth and Space Science New York State Science Learning Standards and the College Board. A college textbook is utilized. Homework, laboratory work, reports and study requirements are all college-level. The course is designed to explore environmental topics at a rigor equivalent to that of a first-year college course. Due to the fast pace and depth of material, extensive work outside the classroom and during the summer will be required. Topics include: forms of pollution, population growth, the use of natural resources, genetics, evolution, biochemistry, and ecology. Students will also investigate the dynamic processes that shape our planet, including geology, Earth's history, meteorology, oceanography, and astronomy. Topics and laboratory work in this class will allow students to understand the interrelationships of the natural world, to identify and to analyze environmental problems both natural and man-made, to evaluate the relative risks associated with these problems and to examine alternative solutions for resolving them. Students are required to take the AP Environmental Science exam in May and the Earth and Space Science Regents examination in June. Students enrolled in the course must successfully complete a minimum of 1,200 minutes of hands-on laboratory work. This course meets for a double period every day.

Prerequisite:

- Students must be accepted into the double-accelerated science program.
- If a student was not accepted into the double-accelerated science program in Grade 6 and would like to be considered for entry into the double-accelerated science program, the student must have a combined average of 97% or higher across classroom exams, quarterly exams, midterm/final exams in Science 7. Please note, students accepted into this course in Grade 8 will take AP Biology in Grade 9 and sit for the Biology Regents

Exam in June of that year. A summer assignment is a requirement. *Please see the pathway below:*

Social Studies

27N001 Social Studies 7

Grade 7 Social Studies focuses on a primarily chronological study of history and geography in the United States and New York as well as economic, social, and political trends. The course content begins with the human experience in the United States from pre-Columbian times until the end of the Civil War, with a focus on the people, events, and places in New York State as applicable. The students will study Native Americans, Colonial Developments, American Independence, the historical development of the US Constitution, Westward Expansion, Reform Movements, A Nation Divided and the Civil War.

28N001 Social Studies 8

Grade 8 Social Studies is arranged chronologically, beginning with Reconstruction and ending at the present, and incorporates geography as well as economic, social and political trends. The course content is divided into nine key ideas; the first seven trace the human experience in the United States from Reconstruction to the end of World War II. The last three key ideas examine different themes in United States and New York State history from the post-War period up to the present day, which provides the opportunity to explore contemporary issues.

Special Education

To the maximum extent appropriate, students with disabilities are offered special education support and services in the least restrictive environment. These supports and services are designed to meet the individual needs of students and are recommended by the Committee on Special Education and approved by the Board of Education. For students with disabilities, a full continuum of services is available including:

Declassification Support Services

These services are provided to a student and/or to a student's teachers to facilitate the transition from special education support to full time enrollment in regular education. Test accommodations are generally included in Declassification Support Services.

Related Services

These services include speech/language therapy, psychological services, physical therapy, occupational therapy, counseling and all other appropriate support services as specified on a student's Individual Education Plan (IEP).

Resource Room

Students in grades 7 and 8 are assigned to the Resource Room where they work in cooperative learning groups. Emphasis is placed on research, writing and editing skills. Independence, accountability and self-advocacy are encouraged in this unique academic environment.

Integrated Co-Teaching Services

Integrated co-teaching services means the provision of specially designed instruction and academic instruction provided to a group of students with disabilities and non-disabled students on a daily basis in regents level classes, grades 7 and 8. The instructional team consists of one general education teacher and one special education teacher.

Special Class Programs

These classes are provided, on a daily basis, to students with disabilities who require a small and structured setting to meet their instructional needs in specific content areas.

Reading

Reading services in grades 7-8 are available. All require teacher recommendation. Please contact the Guidance or Reading department for more information.

World Language

57N100 Spanish I-1

This course is an introduction to the Spanish language and cultures of the Spanish-speaking world. Students learn to understand, speak, read, and write using familiar vocabulary and everyday contexts. Authentic materials and communicative activities help students develop skills in the three modes of communication: interpretive, interpersonal, and presentational. Units of study include Personal Identification, School and Community, Family Life, Food, and Hobbies. Students will develop their proficiency skills in the **novice low to novice mid range** of the NY State Proficiency Ranges for Modern Languages. One third of the final grade will be counted towards the final grade at the end of Spanish 1-2.

Grade 7

58F101 Spanish I-2

This course is a continuation of Spanish 1-1. Students expand their ability to communicate in Spanish while deepening their understanding of Spanish-speaking cultures. Through collaborative projects, short readings, and everyday conversations, students strengthen all three modes of communication: interpretive, interpersonal, and presentational. Units of study include Health and Wellness, Community, Shopping, Travel and Vacations. At the conclusion of this course, students will take the approved **FLACS Checkpoint A exam in Spanish** and demonstrate proficiency in the **novice mid to novice high range** of the NY State Proficiency Ranges for Modern Languages. The final grade for students enrolled in level 1-2 is calculated using grades from level 1-1 & 1-2. (Calculation: grade in level 1-1 (1/3) + grade in level 1-2 (2/3) divided by 3 determines the final grade for level 1). The final grade for Level 1 appears on the high school transcript.

Grade 8

57N101X Spanish I-2 X

This is a Response to Intervention (RTI) class for selected Middle School Spanish students. Students attend a support period every other day for the full school year to receive targeted instruction that reinforces the vocabulary, grammar, and communicative skills taught in their Spanish class. Instruction focuses on developing listening, speaking, reading, and writing proficiency in preparation for class assessments and the culminating FLACS A Exam. Through guided practice, review, and individualized support, students strengthen their foundational language skills and build confidence as they work toward success in their World Language coursework.

57N300 Italian I-1

This course is an introduction to the Italian language and culture. Students learn to understand, speak, read, and write using familiar vocabulary and everyday contexts. Authentic materials and communicative activities help students develop skills in the three modes of communication: interpretive, interpersonal, and presentational. Units of study include Personal Identification, School Life, Family and Friends, Food, and Community. Students will develop their proficiency

in the **novice low to novice mid range** of the NY State Proficiency Ranges for Modern Languages. One third of the Italian I-1 final grade will be counted towards the final grade at the end of Italian 1-2.

Grade 7

58F301 Italian I-2

This course is a continuation of Italian 1-1. Students expand their ability to communicate in Italian while deepening their understanding of Italian culture. Through collaborative projects, short readings, and everyday conversations, students strengthen all three modes of communication: interpretive, interpersonal, and presentational. Units of study include Personal Identity, Health and Wellness, House and Home, The Community, Shopping, Travel, and Celebrations. At the conclusion of this course, students will take the approved **FLACS A exam in Italian** and demonstrate proficiency in the **novice mid to novice high range** of the NY State Proficiency Ranges for Modern Languages. The final grade for students enrolled in level 1-2 is calculated using grades from level 1-1 & 1-2. (Calculation: grade in level 1-1 (1/3) + grade in level 1-2 (2/3) divided by 3 determines the final grade for level 1). The final grade for Level 1 appears on the high school transcript.

Prerequisite: Successful completion of Italian 1-1

Grade 8

57N200 French I-1

This course is an introduction to the French language and Francophone cultures. Students learn to understand, speak, read, and write using familiar vocabulary and everyday contexts. Authentic materials and communicative activities help students develop skills in the three modes of communication: interpretive, interpersonal, and presentational. Units of study include Personal Identification, School Life, Family and Friends, Food, and Community. Students will develop their proficiency skills in the **novice low to novice mid range** of the NY State Proficiency Ranges for Modern Languages. One third of the final grade will be counted towards the final grade at the end of year French 1-2.

Grade 7

58F201 French I-2

This course is a continuation of French 1-1. Students expand their ability to communicate in French while deepening their understanding of Francophone cultures. Through collaborative projects, short readings, and everyday conversations, students strengthen all three modes of communication: interpretive, interpersonal, and presentational. Units of study include Units of study include Health and Wellness, Community, Shopping, Travel and Vacations. At the conclusion of this course, students will take an approved **FLACS Checkpoint A exam in French** and develop their proficiency in the **novice mid to novice high range** of the NY State Proficiency Ranges for Modern Languages. The final grade for students enrolled in level 1-2 is calculated using grades from level 1-1 & 1-2. (Calculation: grade in level 1-1 (1/3) + grade in level 1-2 (2/3) divided by 3 determines the final grade for level 1). The final grade for Level 1 appears on the high school transcript.

Prerequisite: Successful completion of French 1-1

Grade 8

55F500 Chinese Mandarin I-1

This course is an introduction to Mandarin Chinese and the cultures of the Chinese-speaking world. Students learn to understand, speak, read, and write using familiar vocabulary and everyday contexts. As a **Category 3–4 language**, instruction includes Pinyin, basic character writing, and pronunciation practice. Authentic materials and communicative activities help students develop skills in the three modes of communication: interpretive, interpersonal, and presentational. Units of study include Personal Identification, School Life, Family, and Food. Students will develop their proficiency skills in the **novice low range** of the NY State Proficiency Ranges for Modern Languages. One third of the final grade will be counted towards the final grade at the end of Chinese 1-2.

Grade 7

55F501 Chinese Mandarin I-2

This course is a continuation of Chinese 1-1. Students will expand their vocabulary and character recognition, engage in short conversations, and explore cultural practices and products from Chinese-speaking regions. Through collaborative projects, short readings, and everyday conversations, students strengthen all three modes of communication: interpretive, interpersonal, and presentational. Units of study include Daily Routines, Hobbies, Travel, and Festivals. Students will develop their proficiency skills in the **novice mid range** of the NY State Proficiency Ranges for Modern Languages. At the end of this two-year sequence, students will be eligible to take the **FLACS Checkpoint A exam in Chinese**. The final grade for students enrolled in level 1-2 is calculated using grades from level 1-1 & 1-2. (Calculation: grade in level 1-1 (1/3) + grade in level 1-2 (2/3) divided by 3 determines the final grade for level 1). The final grade for Level 1 appears on the high school transcript.

Prerequisite: Successful completion of Chinese 1-1

Grade 8

The Manhasset Middle School Experience- a special place where elementary students may enter as dependent learners in grade seven but leave enriched with an experience which allows them to become independent learners ready for ninth grade.

During these important years of monumental change, our staff is committed to helping each and every student make this transition. We believe this is the most precious time of a young person's life socially, emotionally, and academically. Our expectation is to work as a TEAM with parents/guardians to help our students achieve their highest potential.
